Thanks for the opportunity to continue with communications in regards to both transportation and planning on the Sunshine Coast. As you are aware I have been a sitting Councillor for the Sunshine Coast Council for 3 terms, 12 years.

I have a full and complete understanding of the pressures and the difficulties within both .

In regards to my responses to the questions, I have always supported the planning scheme and I have supported the transport levy, strategies, and have always had a very open mind to the types of transportation we have considered over the years. That said it's very important to understand that I was very much engaged with the Trackless trams before it was even an option.

Years ago I was also one of the first to trial the Automated autonomous vehicle trial we hosted at Mooloolaba. I am excited about the future technologies that we could well embrace here on the Sunshine Coast.

I intend to put onto the council agenda a micro mobility strategy. Something that engages with all transport, from active transport right through to high level people movements. It's incredibly detailed and I'm v happy to discuss.

In regards to density, we clearly have a huge responsibility, and something I'm very happy to go into detail on with you at any stage.

Again, I'm a sitting councillor that has always supported the planning scheme and our position on transport.

Thanks for the opportunity again
